

River Quest 2018

“Bacteria: The Real Workers at WLSSD”

MN Standard
6.1.2.1.1
The Nature of Science & Engineering
WI Next Generation
MS-ETS1-1
Engineering Design

Synopsis

Before WLSSD began treating wastewater from homes and businesses in the Duluth and Cloquet area in 1978, the St. Louis River was not much better than a sewer. Dirty water was often dumped directly into the river. People did not come to fish or swim; fish kills and big mats of sludge were not uncommon sights. Today, the St. Louis River is a much nicer place, a place where people enjoy boating (like the Vista Fleet!), fishing and swimming. WLSSD played a large role in the river’s recovery by treating dirty water before it was returned to the river using an engineered process that mimics what happens in nature.

In WLSSD’s River Quest presentation, students will see samples of dirty water and learn about the process WLSSD uses to clean it. Students will see tiny, living microorganisms used in wastewater treatment through the use of a microscope and television screen.

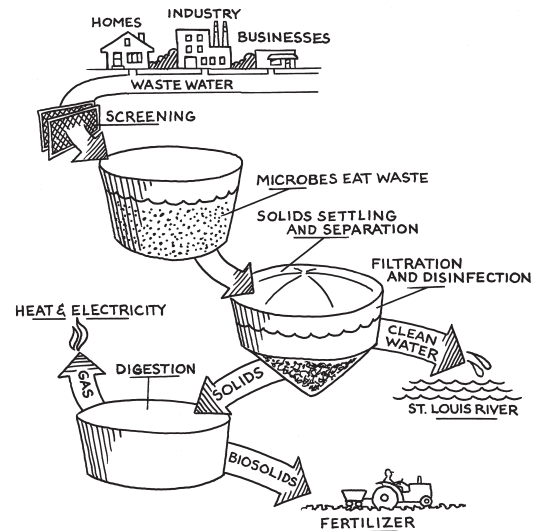

Reference Materials Available at wlsd.com

Wastewater Treatment at WLSSD:
<http://wlsd.com/services/wastewater/treatment-process>

“Return to the River: Restoring Clean Water” :
vimeo.com/4532327 19 minute video produced by WLSSD describes the wastewater treatment process. DVDs available by request @ 740-4784

“Household Hazardous Wastes” for more info about what should be brought to the HHW facility.

“How to Make a Non-Toxic Home Cleaning Kit” sheet for information on safe cleaning alternatives that help protect the biological process and keep water clean.

Vocabulary List:

- Influent
- Effluent
- Bacteria
- Biosolids
- Household Hazardous Waste

WLSSD offers tours of our solid waste facilities (including the garbage transfer station, the organics composting site and the HHW facility) for elementary students. Wastewater treatment plant tours are available to students age 13 and older. To schedule a tour, contact:
